

Installation

Delivery E-mail: Moto CMS HTML template package

After you have purchased Moto CMS HTML template you will receive an email from "Template Delivery Service" with following information (example)

Hello,

Thank you for your purchase.

Please find the download link for your product, the invoice and information about our special offers at your personal delivery page:

https://secure.template-help.com/delivery.php?order_id=IYXeQ3p3o1oewrrewRvR&sign=B4CC50F60324E8A97E3A86E52948DF19

The source files within the template package are encrypted for security purpose. Please, use your transaction ID IYXeQ3p3odasrU6x7AvR to uncompress the archive.

*It's been a pleasure to work with you,
Take care!*

Open hyperlink, provided in email to get to your template download page. It should look like this one:

Dear customer!

Thank you for your order! It is now successfully accomplished.

Order Information

- Your e-mail address you've used for purchasing:
- Your template(s) item number:
- Your transaction ID:
- Merchant System Order #:
- Total order amount:

If you need to have an invoice for this purchase, please click this link:

[Get Invoice](#)

Download Instructions To get your template(s) click the link :

[Download template](#)

For security reasons the directory containing all the source files of the template ("SOURCES_XXXXXXX") is in a compressed (zipped) file and password protected. As soon as the zip file begins to uncompress, you will be prompted to type in a password.

The password is the ID number of your order:

IMPORTANT: Please **DO NOT** upload source files (.psd, .tff, .fla) to your FTP unless you have disabled public access to folders. We have recently discovered that internet hackers can steal these files and distribute them through warez sites. Please help us to save the uniqueness of your design!

PLEASE NOTE: all the links will stay active for 3 days for security reasons. After that you may contact our support team to reactivate it.

Bonuses

In association with JustHost.com we provide a striking offer - a whole year of **FREE UNLIMITED HOSTING PACKAGE AND A FREE DOMAIN!** Get unlimited disk space, unlimited traffic and all of the latest hosting features with this awesome bonus offer! **NOTE:** By applying to this offer you agree to transfer certain personal data - name, billing address and an email address - to JustHost.com (no malicious or spamming mailing methods are allowed).

[Click here to apply!](#)

Click the “Download” button and download process of your files will start. Once it is done, you will have an archive with your template's files.

NB: If you need an invoice for your purchase, you should click the “Download invoice” link on this page in order to get it.

Moto CMS HTML template installation

Please make sure that your server configuration fully meets the software requirements:

For the servers with PHP 5.2 installed:

- Zend Optimizer 3.3 or higher

For the servers with PHP 5.3 or PHP 5.4 installed:

- Zend Guard Loader

If you are unsure whether your server meets these requirements, please contact your hosting provider for additional information.

If your hosting provider doesn't support such requirements or you still do not have a hosting provider - we may recommend you to get it with our recommended hosting company [BlueHost](#), which fully support all requirements of our templates. You can reach them directly by following this link: [BlueHost](#).

Unzip files from your archive: you will see the “site” folder, that contains files that you should upload to your server.

Important! Source files are not provided for this product and they are not present in the "source" folder.

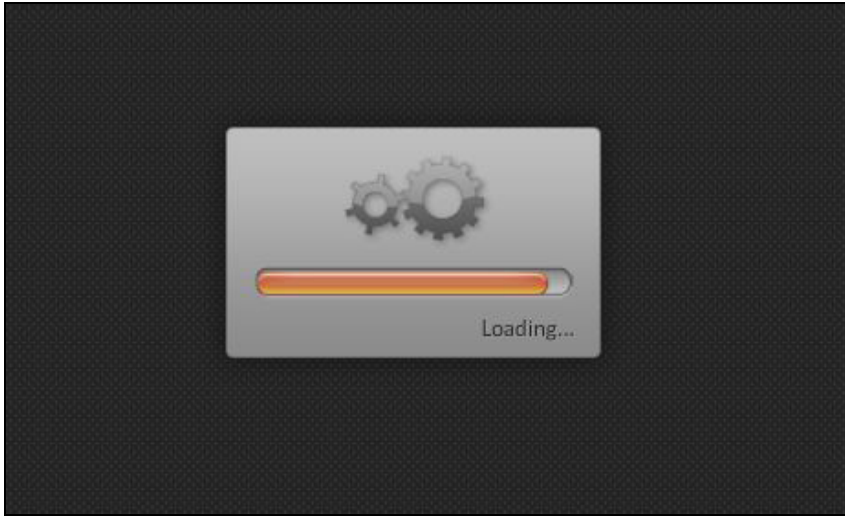

Open your FTP software and set its file transfer mode to [binary](#). You should use one of the recommended programs: **FileZilla**, **Cyberduck**, **WinSCP**.

Upload contents from the “site” folder to your server. Please note that you only have to upload the **contents** of this folder, not the folder itself.

Then visit your website and see the results. To access the control panel, add “/admin” to your site’s URL (example): <http://mysitename.com/admin/> and you will see the control panel loading.

First start

To launch the Moto CMS control panel you need to add */admin* to the URL of your HTML site. For example, your website is located at *myhtmlwebsite.com*. So to enter your control panel you have to type *myhtmlwebsite.com/admin* in the address bar of your browser.

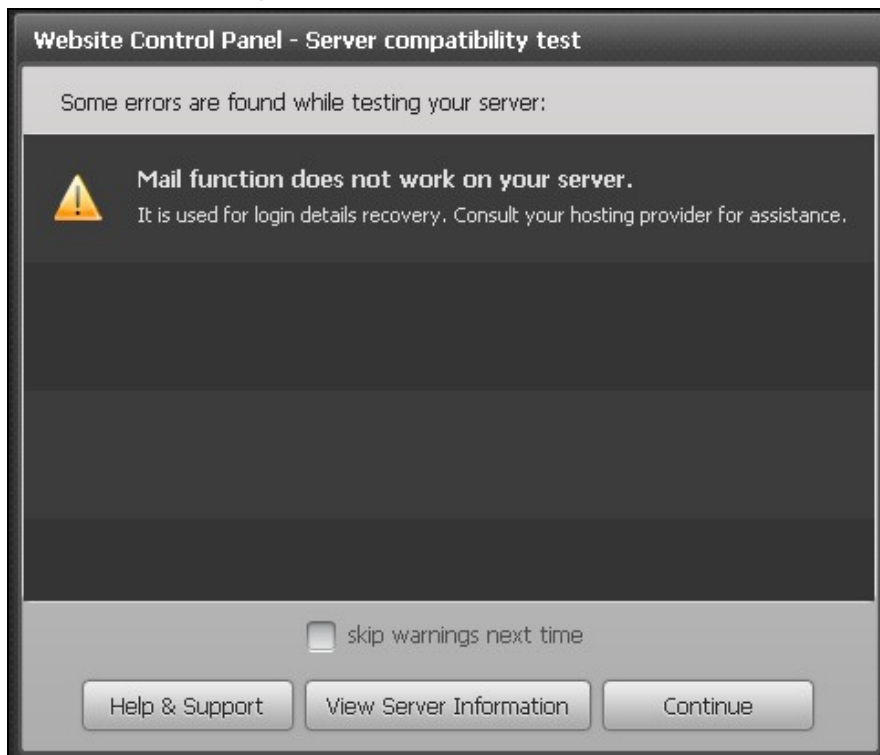

When you access the Moto CMS control panel for the first time, you will see the application progress bar and a server testing window. A quick setup process will start automatically. If the application fails to load for some reason or you get different errors, please refer to the [Typical Errors list](#).

Server Test

An automatic server test will start during the first run of the Moto CMS control panel. If there are no errors found, you will be guided through the quick system setup process.

An automatic server test will check if the server meets all the requirements and if it is compatible with Moto CMS. Normally it checks the PHP version installed, PHP extensions required and file permissions set. In case your server does not meet the requirements specified on the template preview page, you can refer the list of possible errors.

Possible errors and the ways to solve them:

- **PHP version is lower than required.** This error occurs if the PHP version doesn't satisfy the requirements. In order to work with Moto CMS you will need **PHP 5.2** and Zend Optimizer 3.3+ or **PHP 5.3 / PHP 5.4** and Zend Guard Loader. If the PHP version installed on the server doesn't correspond to the required one, please contact your hosting provider.
- **PHP extension is not loaded.** This error happens in case if some required PHP extensions are not installed. You need the following extensions to work with Moto CMS: **spl, dom, reflection, mcrypt, curl, gd, json**. These extensions are used by many scripts and in general are turned on by default. If for some reason something is turned off, please contact your hosting provider with a request to turn on all necessary extensions
- **Maximum upload file size is set lower than required.** This error occurs if PHP settings don't allow uploading files of more than 2 MB. The maximum upload file size is depending on the server's PHP memory settings. Moto CMS itself have absolutely no restrictions for this. Please, contact your hosting provider and ask them if it is possible to increase **upload_max_filesize, post_max_size** and **memory_limit** settings to the values you need.
- **Directory or file is not readable or writeable.** Some directories and files should be readable and writeable so that Moto CMS could work properly.

Please make sure that permissions for the following folders are set to **775** (drwxrwxr-x):

*/xml/
/xml/modules/
/admin/data/
/admin/logs/
/admin/xml/
/admin/_tmp/
/admin/_tmp/backup/
/admin/_tmp/cache/
/fonts/
/images/
/images/_preview/
/media/
/admin/actions/backup/_backups/
/m/xml/
/m/template/
/m/blank/
/m/template/xml
/m/blank/xml
/m/xml/modules/
/m/template/xml/modules/
/m/blank/xml/modules/*

Following files should have permissions set to **664** (-rw-rw-r--):

*/xml/~all files
/config.xml
/admin/config.xml
/admin/data/users.xml*

/admin/xml/~all files
/admin/_tmp/~all files
/m/xml/~all files
/m/template/~all files
/m/blank/~all files
/m/template/xml/~all files
/m/blank/xml/~all files
/m/xml/modules/~all files
/m/template/xml/modules/~all files
/m/blank/xml/modules/~all files

Also, following files should have permissions set to **755** (-rwxr-xr-x):

/admin/actions/upload_media.php
/admin/actions/upload_fonts.php
/admin/gateway.php

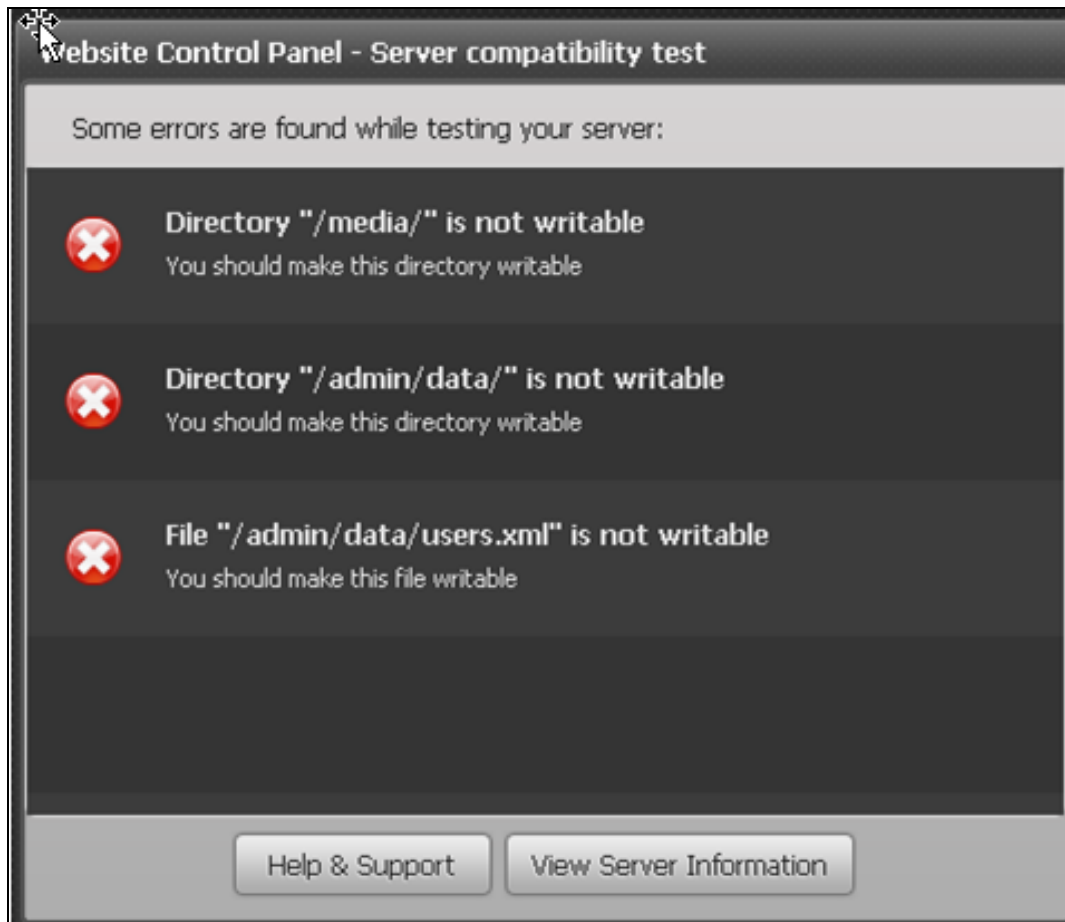

The rest of the files should have the permissions set to **644** (-rw-r--r--).

The rest of the folders should have the permissions set to **755** (drwxr-xr-x).

If the above permissions will not work, you can try to set **777** (drwxrwxrwx) for directories and .xml files.

The "View Server Information" button runs a file that displays all information about your server and the PHP version. So you can easily verify what options are turned on and off.

If some adjustments need to be performed on the server, the control panel will display a window with instructions on how to do that.

Control Panel setup

Normally the first Moto CMS startup leads you to the quick setup process. In order to set up your control panel, please follow the steps below:

1. Welcome to the control panel setup.

Control Panel Setup - Step 1

1. WELCOME >

2. CHOOSE LANGUAGE

3. USER INFORMATION

4. WEBSITE CONFIGURATION

Welcome to the professional flash content management system.

This setup will help you tune up the system. During the setup process you may choose the control panel language, create a new account for the system security and complete website basic setup.

Please click **Next Step** to continue.

Next Step

2. Choose the control panel language.

Control Panel Setup - Step 2

1. WELCOME

2. CHOOSE LANGUAGE >

3. USER INFORMATION

4. WEBSITE CONFIGURATION

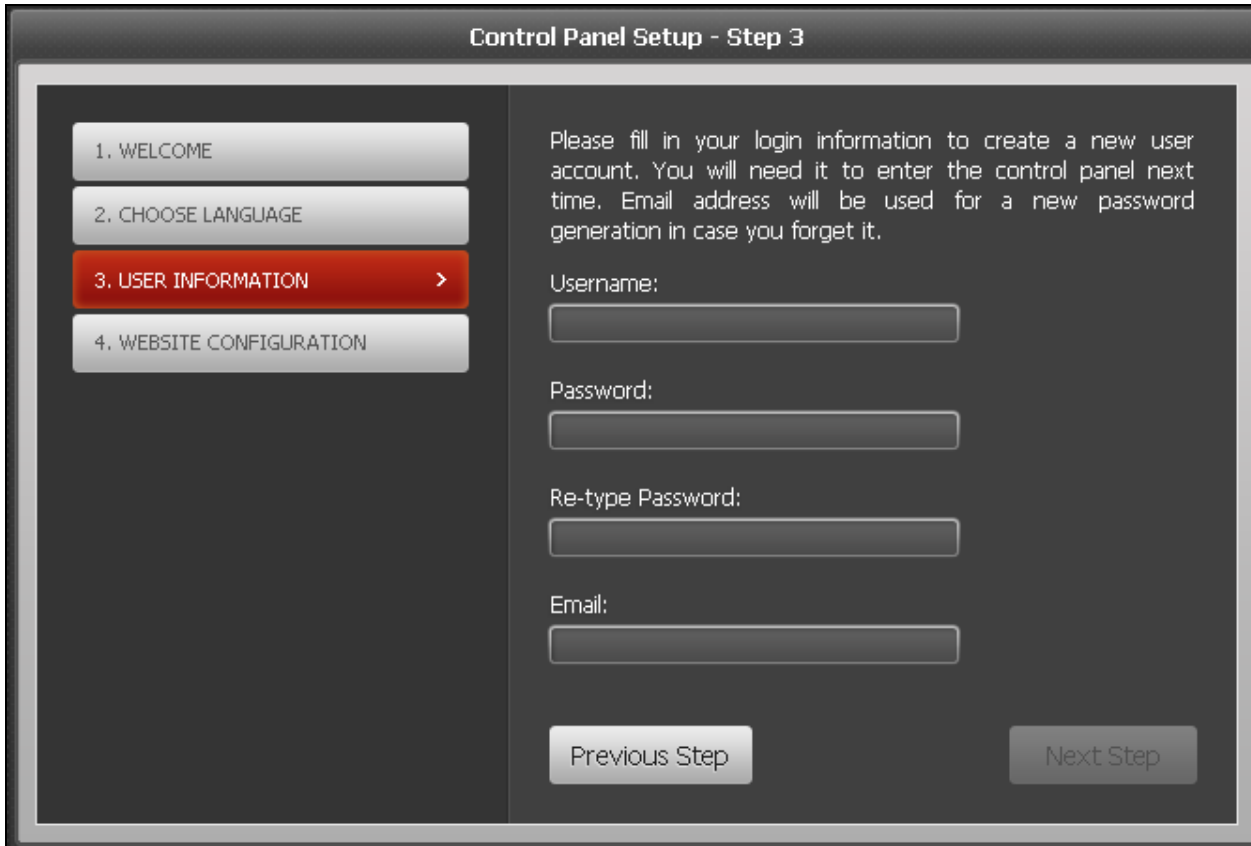

Choose control panel language:

English ▼

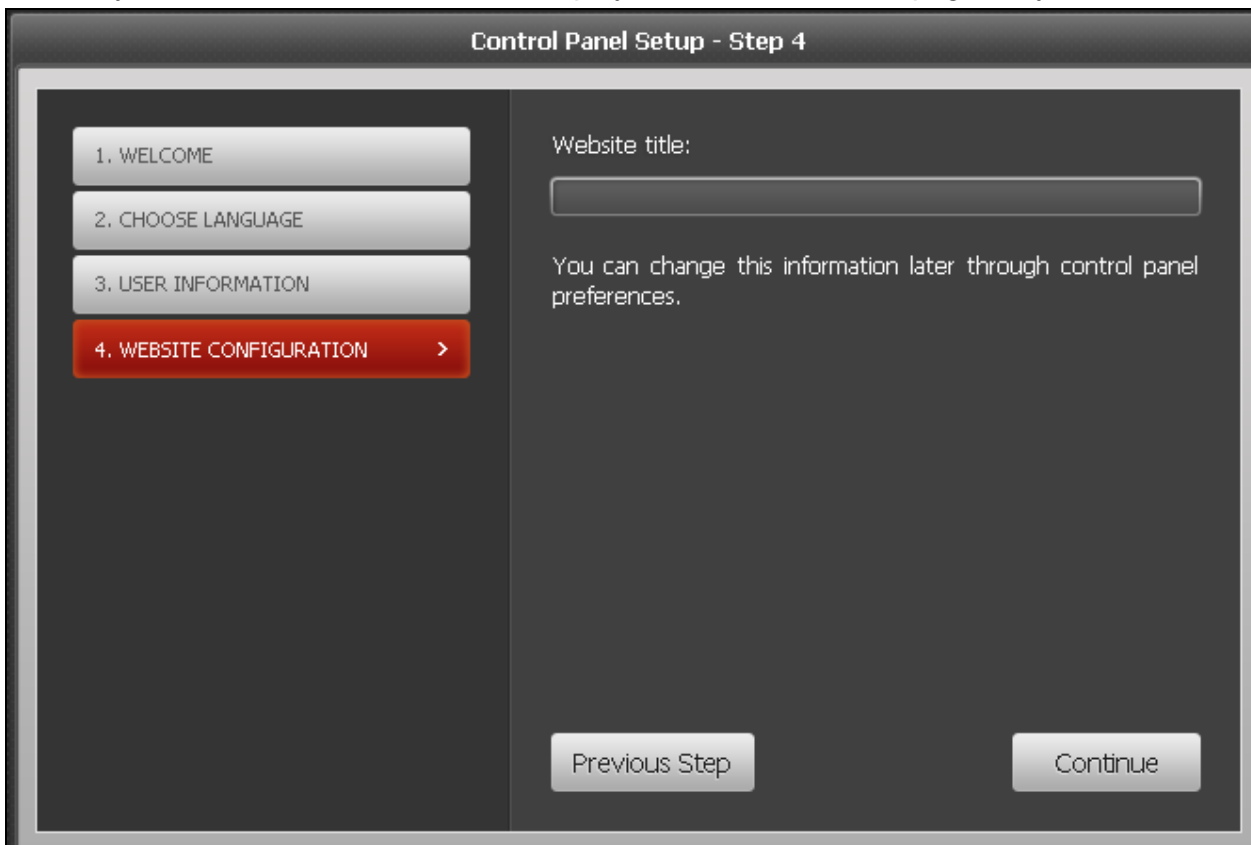

Previous Step

Next Step

3. Create a new user account. You should fill in your user name/login, password and your email that is used to retrieve your account information in case you lose it (if you forget your password, please submit your email address for password retrieval).

4. Enter your website's name – it will be displayed in title of all of the pages of your website.

This quick setup process launches only once after you have used Moto CMS control panel. In other cases the system immediately goes to the login stage.
